\* \*\*Imagery Editor:\*\* The ruler and grid are found in this tool. The ruler shows you how to manipulate objects on the canvas or move them along the edges of the canvas, depending on where you click on the ruler. The grid enables you to move and resize objects using squares or to use measurements in pixels. Use this tool for rotating and resizing objects, adding effects, blending images, and other tasks. \* \*\*Adjustment Layers:\*\* This tool gives you access to all of the color- and brightness-adjustment settings in the program. You can also apply effects in this tool to smooth out an image, add glow, or adjust color. Adjustment layers can be hidden and even reset to remove them from the image. You can lock these settings, allowing you to save the layers as a unique selection with a name and apply the layer as a layer mask. Adobe Photoshop Elements includes a selection of added features. These features can all be found in the Photoshop program, but they are enabled and ready to use in the other programs, too. For example, the Paint Bucket tool is identical in all three programs. \* \*\*Paint Bucket:\*\* This is the tool that lets you paint selected areas. If you select multiple areas, the Paint Bucket can use a selected part of an image as a mask to leave other selected areas unchanged. You can even control the color of the paint with the options. \* \*\*Motion Paths:\*\* Motion Paths is an animatable selection that works well for compositing and quick retouching, as well as for simplifying a complicated layout. You can make the selection move around the document or give it some type of motion, such as wiggling. Once you've selected an object that you want to move, you can access a limited number of guides (or motion paths) that enable you to precisely control the movement of the object. The tool is automatically created when you select the Move Object tool, but you can also make one by drawing lines on the image.

The Apple 5 has received its first official leak via Chinese website Shenmeng. We can finally confirm that this iPhone 5 will come in Gold, Silver and Space Gray options. The device will be launched in June, 4 or 5 this June, and it will use the 32-bit A7 CPU along with a Force Touch display, but there are some differences with the iPhone 5S. The most important difference is that it will not be launched with a new larger 3.5-inch display but a 3.5-inch HD version, whose resolution should be 1280x720 pixels. In fact, a 565ppi display is expected. As far as the chipset is concerned, the same model as on the iPhone 5S is expected to use a 64-bit A7, which will definitely benefit from the 64-bit architecture, thanks to the much better performance of the CPU. The 3D Touch will also be much more useful on this iPhone 5, as the screen will be able to distinguish between the pressing and a gentle touch. The display should be 15 percent brighter and consume around 15 percent less power. As far as the camera is concerned, the 3.2-megapixel shooter will be retained and include OIS. The battery will be 2700mAh, and the phone will feature an eight-megapixel front camera. This will allow 3x digital zoom with autofocus and IR auto flash. The price of this phone is also a mystery for us, as we don't know the exact price, but since it will come in the cheapest iPhone 5 model, we guess the price could come at around \$650.
